1. Product Information

1-1 Introduction and Safety Information

Thank you for purchasing DG-BG4300NU 300Mbps Wireless ADSL2/2+ Broadband Router with USB port! This router is the best choice for Small office / Home office users, all computers and network devices can share a single Internet connection at high speed. Easy Installation wizard provided with this router is designed to setup an Internet connection in a very short time by accessing the web configuration of the router. With its wireless speed up to 300Mbps users can experience uninterrupted Internet and multimedia access.

Other features of this Router include:

- High Internet Access throughput. Downstream up to 24 Mbps and Upstream up to 1 Mbps.
- Wireless speed up to 300Mbps.
- Robust WLAN Security.
- Supports URL blocking & Firewall.
- Dedicated WPS and WLAN push button.
- Dynamic DNS and VPN Pass through support.
- USB2.0 Port for 3G Dongle & Mass Storage.
- Allows multiple users to share a single ADSL internet connection.
- Access private LAN servers from the Internet.
- Four wired LAN ports (10/100M) and one WAN port (RJ-11).
- Works with IEEE 802.11b/g/n wireless LAN devices.
- Supports IPv6.
- Supports DHCP (Server/Client) for easy IP-address setup.

1-2 Safety Information

In order to keep the safety of users and your properties, please follow the safety instructions as mentioned below:

1. This router is designed for indoor use only; **DO NOT** place this router outdoor.
2. **DO NOT** place this router close to a hot or humid area, like kitchen or bathroom. Also, **DO NOT** leave this router in the car during summer.
3. **DO NOT** pull any connected cable with force; disconnect it from the router first.
4. If you want to place this Router at a height or mount on the wall, please make sure it is firmly secured. Falling from a height would damage the router and its accessories and warranty will be void.
5. Accessories of this router, like antenna and power supply, are dangerous to small children. **KEEP THIS ROUTER OUT OF REACH OF CHILDREN.**
6. The Router will get heated up when used for a long time (This is normal and is not a malfunction). **DO NOT** put this Router on paper, cloth, or other flammable materials.
7. There's no user-serviceable part inside the router. If you find that the router is not working properly, please contact your dealer of purchase and ask for help. **DO NOT** disassemble the router, warranty will be void.
8. If the router falls into water when it's powered, **DO NOT** use your hands to pick it up. Switch the electrical power off before you do anything, or contact an experienced electrical technician for help.
9. If you smell something strange, or even see some smoke coming out from the router or power supply, remove the power supply or switch the electrical power off immediately, and call the dealer of purchase for help.

1-3 System Requirements

- Notebook or desktop PC with network adapter (wired/WLAN)
- Windows 98/Me/2000/XP/Vista
- Web browser
- AC power socket (100 – 240V, 50/60Hz)

1-4 Package Contents

Before you start using this router, please check if there's anything missing in the package, and contact your dealer of purchase to claim for missing items:

- DG-BG4300NU ADSL 2/2+ Broadband Router With 3G
- POTS splitter
- AC power adapter
- Quick Installation Guide
- Installation Guide CD (includes user manual & QIG)
- Patch cord (1 No.)
- RJ-11 cables (2 Nos.)

1-5 Get Familiar with your new ADSL2+ Wireless broadband router

Top Panel

LED Name	LED Color	Light Status	Description
Power	Red	ON	Device is initializing or initialization has failed.
		OFF	Power is OFF.
		ON	Power is ON.
LAN (1~4)	Green	ON	PC is connected on LAN Port.
		OFF	PC is Unplugged / Not Connected.
WPS	Green	Blinking	WPS negotiation is enabled, waiting for the clients.
		OFF	WPS negotiation is not enabled on the device.
WLAN	Green	ON	Wireless is enabled.
		Blinking	Data is being transmitted or received.
		OFF	Wireless is not enabled.
USB	Green	ON	USB device is plugged.
		OFF	USB device is not plugged.
DSL	Green	ON	Physical link is UP.
		Blinking	ADSL handshaking process is ON or ADSL Line is unplugged.
Internet	Green	ON	Internet connection is established.
		Blinking	Data is being transmitted or received.
		OFF	Device is not connected to Internet.

Rear Panel

Interfaces	Description
Antennas	They are 5dBi fixed antennas.
Power	Power connector, connects to A/C power adapter.
Switch	Press this button to power on/off the router.
WPS	Press this button for less than 3 seconds to start WPS function.
WLAN	Press this button up to 3 seconds to ON/OFF WLAN.
USB	USB port is provided for 3G dongle connection or USB disk mass storage.
LAN (1~4)	Local Area Network (LAN) ports 1 to 4.
DSL	Connect ISP line to the Line port.

Note: Kindly note that the Reset button for resetting the device to factory default settings is provided on the back panel/bottom side of the device.

2. System and Network Setup

2-1 Hardware Installation

- Step 1** Connect the Line interface of the device and the Modem interface of the splitter with a telephone cable. Connect the phone set to the Phone interface of the splitter through a telephone cable. Connect the input cable to the Line interface of the splitter.

- Step 2** Connect all your computers, network devices (switch / hub) to the LAN port of the router.

Step 3 Connect the power adapter (12V DC / 1A) to the wall socket, and then connect it to the 'Power' socket of the router.

Step 4 Please check all LEDs on the front panel. 'Power LED' should be steadily ON, ADSL and LAN should be ON. Check if the computer / network device connected to the respective port of the router is powered ON and correctly connected. If power LED is not ON, or any LED you expected is not ON, please recheck the cabling.

3. Web Browser Configuration

The DSL device is an ADSL2+ wireless router.

- LAN IP address: **192.168.1.1**, Netmask: **255.255.255.0**
- Default VPI/VCI for ATM (maximum 8 sets): **0/32, 1/32, 0/35**
- ADSL Line mode: Auto-detect.

User can change settings via WEB browser. The following sections describe the set up procedures.

Please set your PC's Ethernet port as follows:

- IP address: **192.168.1.XXX (e.g. 192.168.1.10)**
- Netmask: **255.255.255.0**
- Default Gateway: **192.168.1.1**

Access the Web Console:

- Start your web browser.
- Type the Ethernet IP address of the modem/router on the address bar of the browser. Default IP address is 192.168.1.1.
- Enter Password in the dialog box when it appears. Default Username: **admin** Password: **admin**

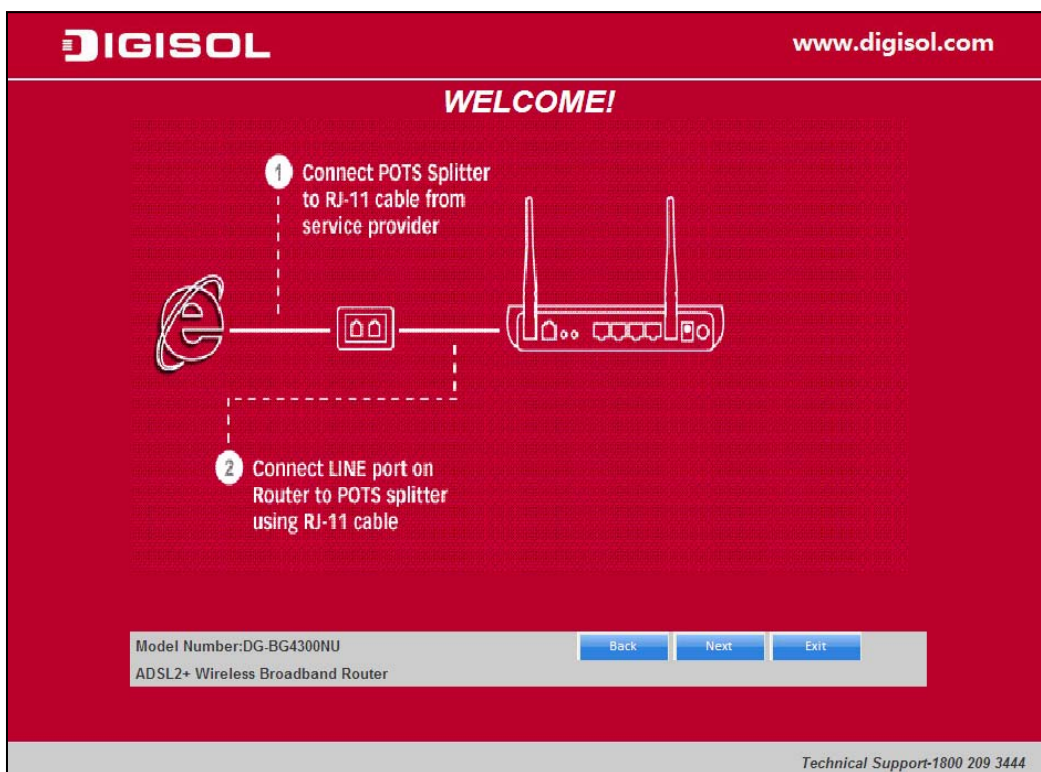

Please note that the below welcome screen will appear when the router configuration is factory defaults. Click **“Start”** to use the Quick setup wizard for basic settings or click **“Advanced”** to setup advanced features and skip the Wizard.

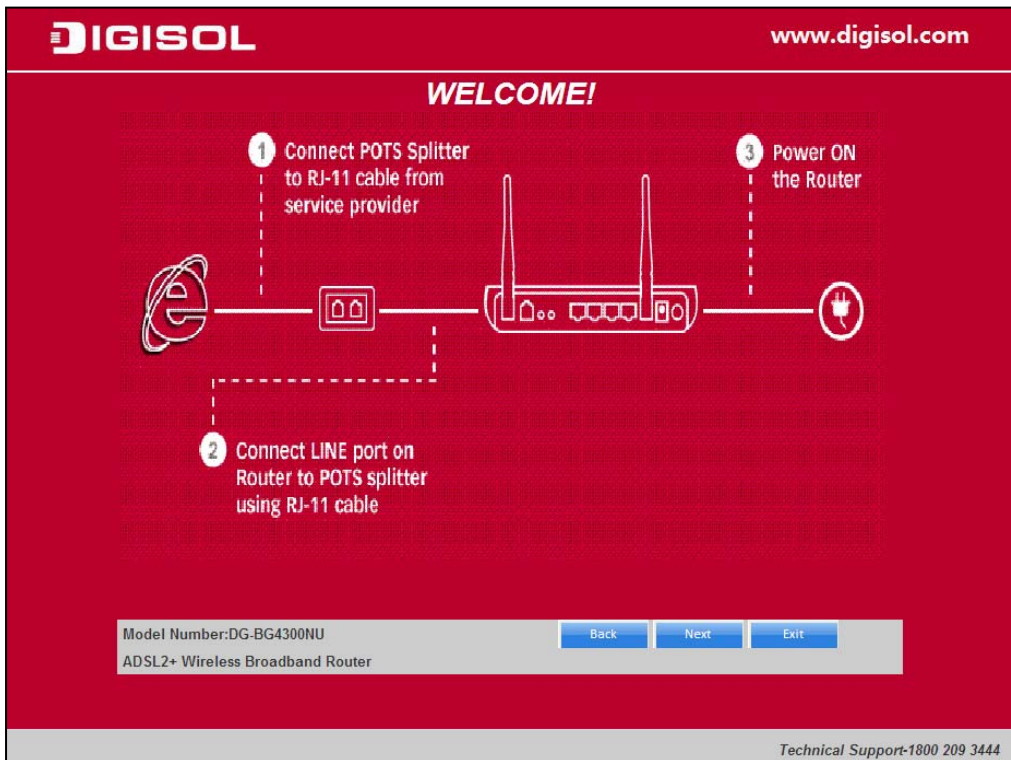

- Once you login the following screen will appear.

- Click on “**Start**”, the following screen will appear. Connect one end of the RJ-11 telephone cable into the ADSL port provided on the splitter from the service provider and connect the other telephone cable from the splitter to the LINE port on the router. Click ‘**Next**’ to continue.

- Power ON the router. Ensure that all the LED's on the router are ON. If not, try the above steps again else click 'Next' to continue.

- Connect one end of the network cable to one of the LAN ports (1~4) of the router and the other end to your computer. Click 'Next' to continue with the installation.

- Click on “Next”. The LED description table will appear.

LED Description:

LED Name	LED Color	Light Status	Description
Power	Red	ON	Device is initializing or initialization has failed.
	Green	OFF	Power is OFF
LAN (1-4)		ON	Power is ON
	WPS	ON	PC is connected on LAN Port
WLAN		OFF	PC is Unplugged / Not Connected
	USB	Blinking	WPS negotiation is enabled, waiting for the clients.
DSL		OFF	WPS negotiation is not enabled on the device.
	Internet	ON	Wireless is enabled.
Internet		Blinking	Data is being transmitted or received.
	Internet	OFF	Wireless is not enabled.
Internet		ON	USB device is plugged.
	Internet	OFF	USB device is not plugged.
Internet		ON	Physical link is UP
	Internet	Blinking	ADSL handshaking process is ON or ADSL Line unplugged
Internet		ON	Internet connection is established.
	Internet	Blinking	Data is being transmitted or received.
Internet		OFF	Device is not connected to Internet.

- Click on “Next”. The WAN connection summary will appear. Click on “Finish” or “Next” to configure wireless settings.

Note: The Wireless configuration steps mentioned below are common for all the modes.

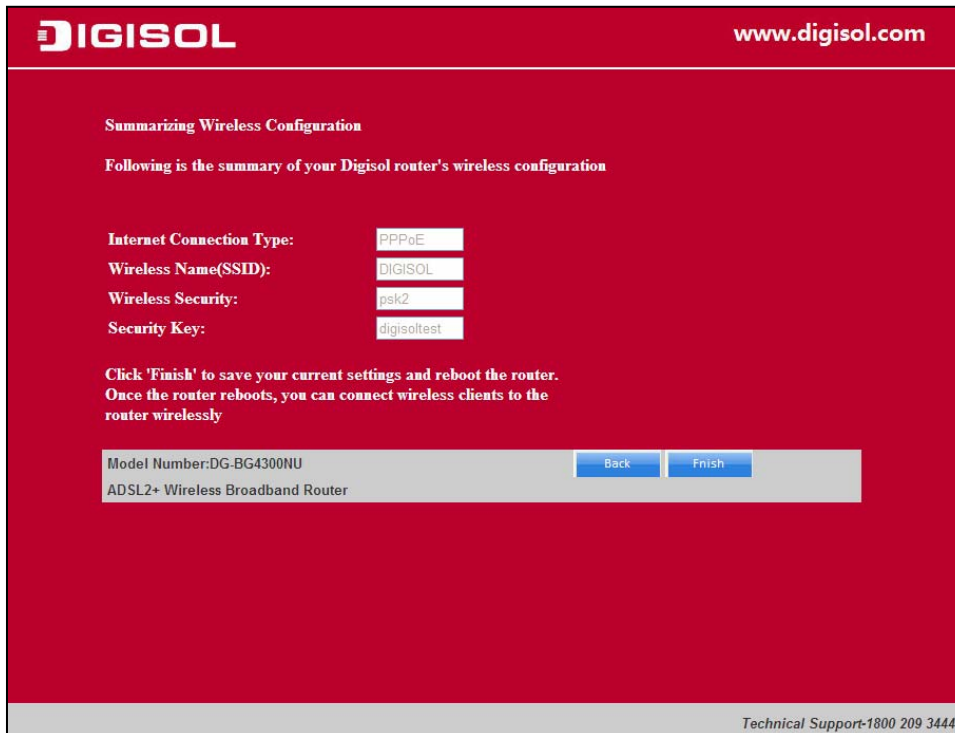

- Click “Next” to configure the wireless settings. In this page, you can set the SSID for wireless network.

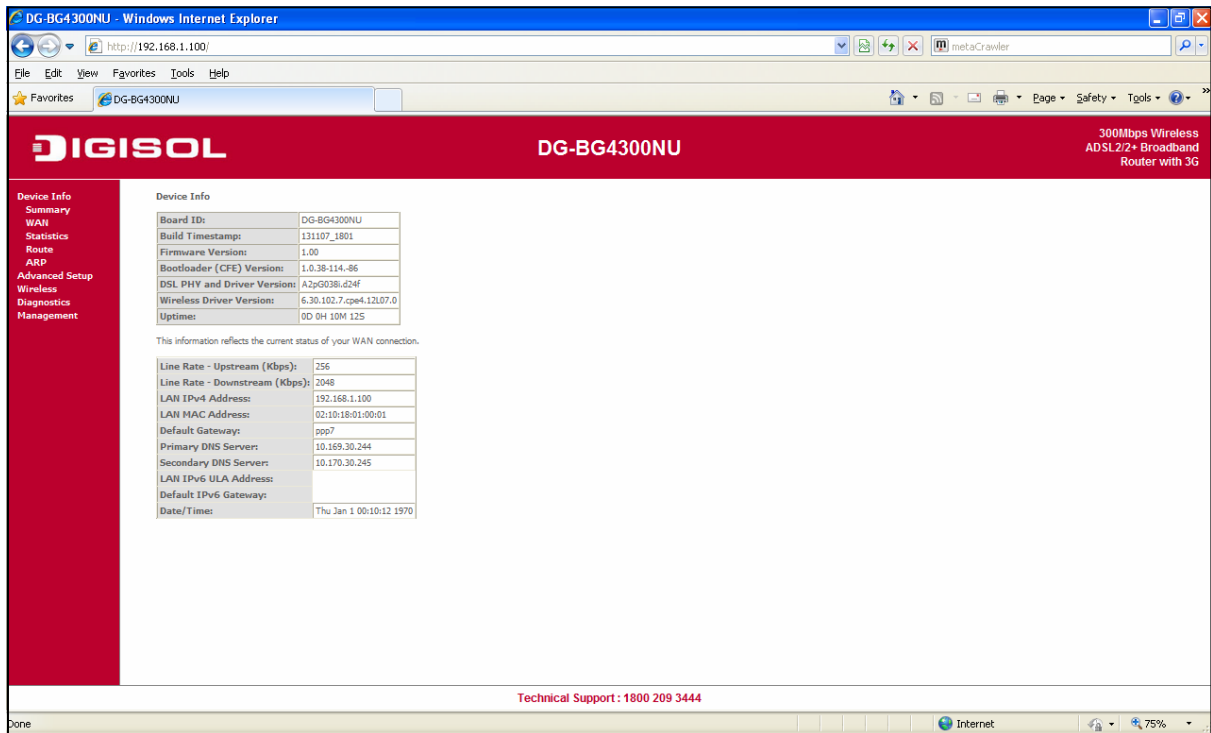

- Click 'Next' and the following page appears. In this page, you can select **WPA2-PSK** as the security mode.

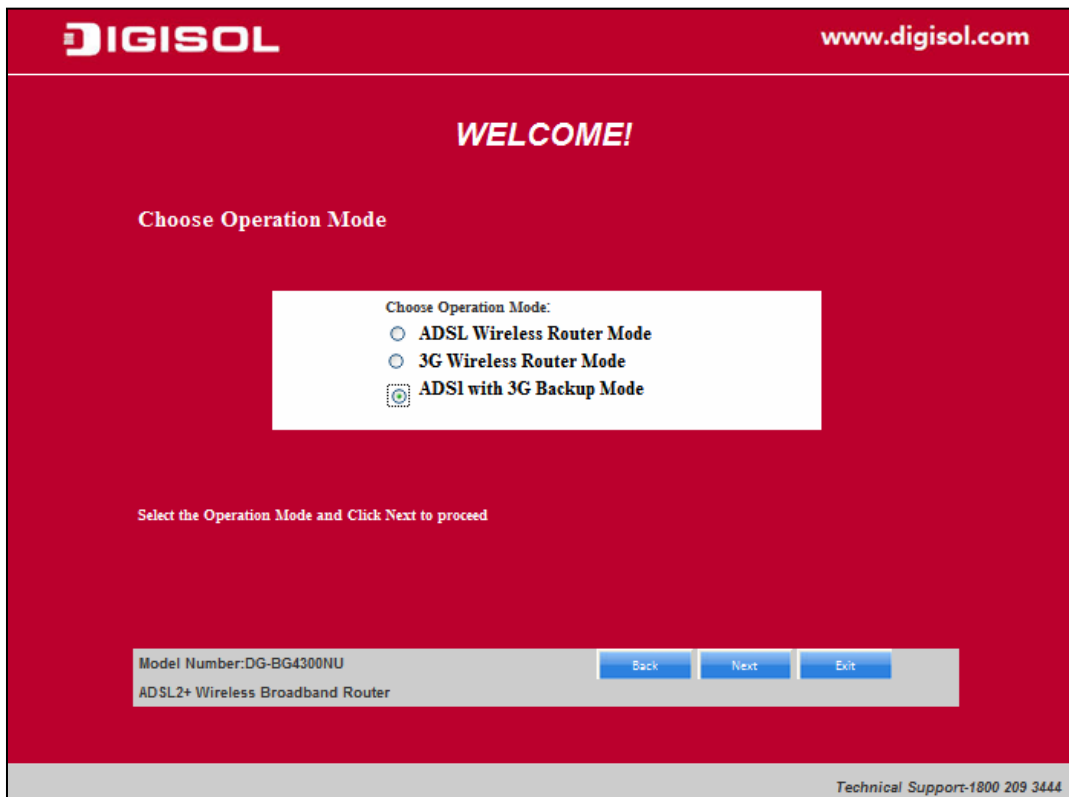

- Click 'Next' and the following page appears. In this page, you can view the configuration summary.

- Click **'Finish'** to save your settings and reboot the router. Once the settings are applied the following screen will appear.

- II) Select the operation mode **"ADSL with 3G Backup Mode"**. Click on **"Next"**. The screen shown below will appear.

- Enter the “APN code” and “Dialup Number” as shown below. Click on “Next”.

- Select the type of network protocol and click ‘Next’ to continue with the installation.

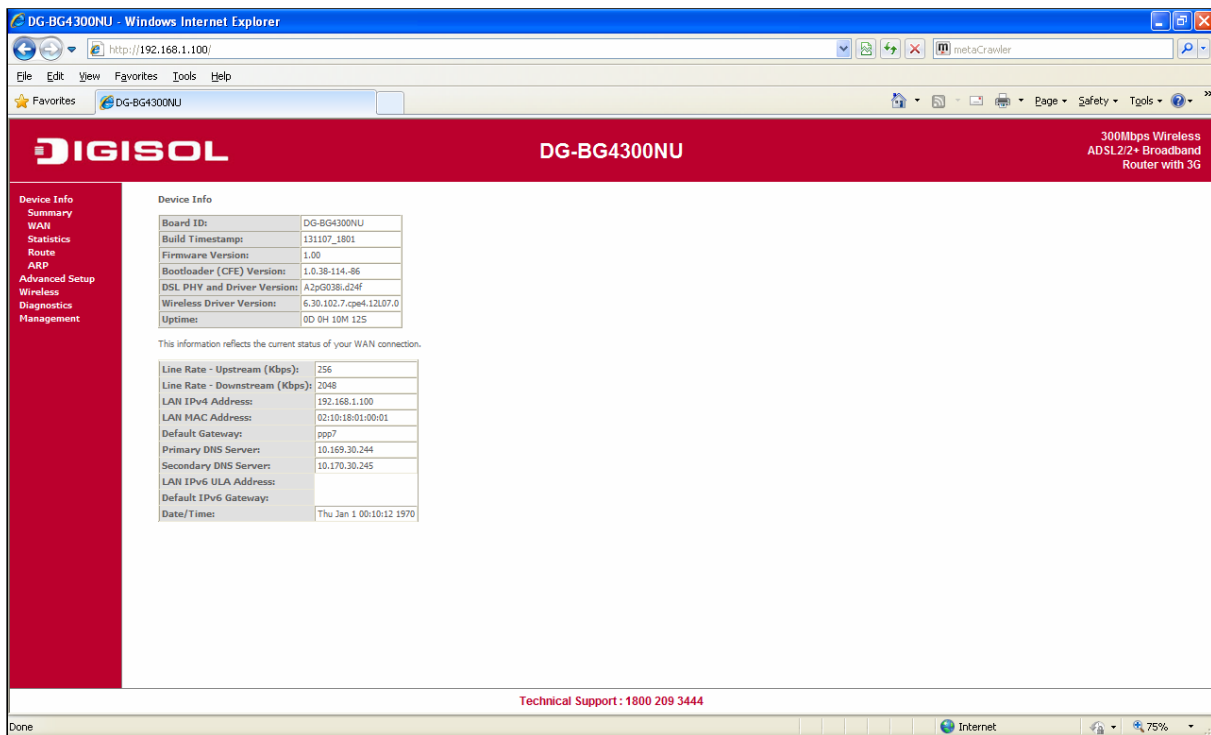

- Select the Country: India and then select the service provider from the drop-down list. You can change the VPI/VCI values as instructed by your ISP.

- Click on “**Next**” and enter the correct user ID and password for PPPoE mode that is provided by your ISP. After the settings are done, click ‘**Next**’ to continue with the installation.

- Following page appears showing the WAN status.

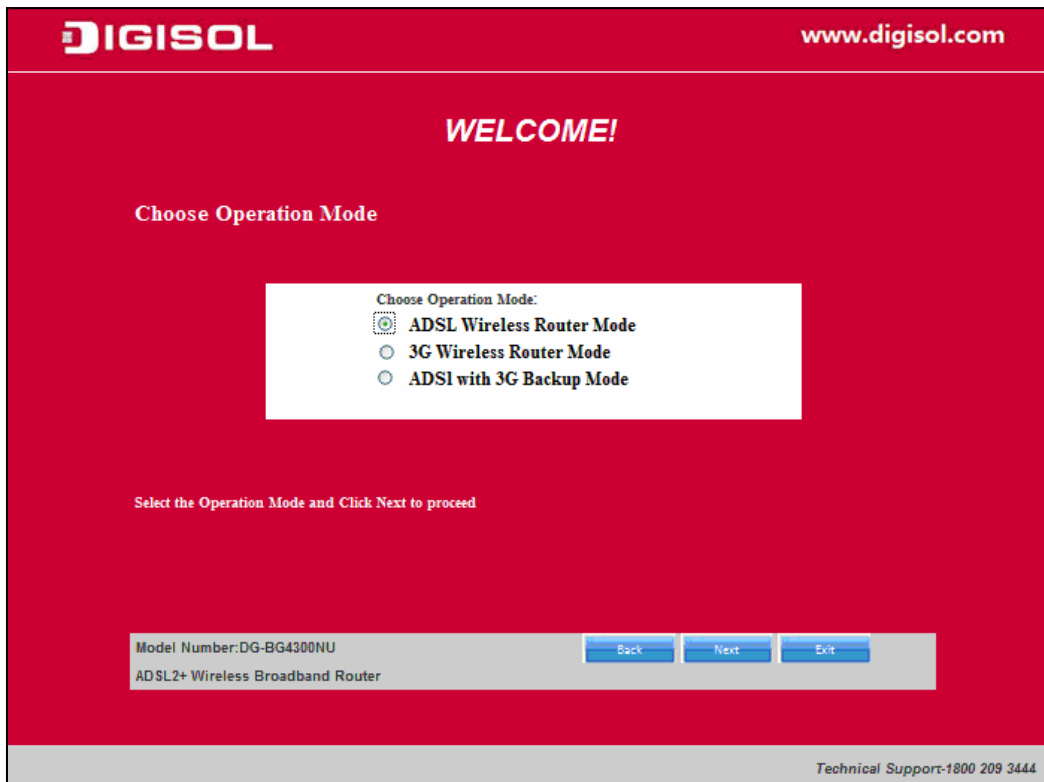

Once the settings are applied the following screen will appear.

For wireless configuration settings refer to steps mentioned on [page 17](#).

- III) Select the operation mode “**ADSL Wireless Router Mode**”. Click on “**Next**”. The screen shown below will appear.

- Select the type of network protocol and click ‘**Next**’ to continue with the installation.

You can select **LLC** or **VC-Mux** as the encapsulation mode according to the uplink equipment or use the default setting.

- **1483 Bridged:** If you select 1483 Bridged as the WAN protocol, you must use the third party Dial-up software or Windows New Connection Wizard to configure the Internet dial-up access.
 - **1483 MER:** If you select 1483 MER as the WAN protocol, the router obtains an IP address automatically.
 - **PPPoE /PPPoA:** If you select PPPoE or PPPoA as the WAN protocol, click Next, and the following page appears.
 - **1483 Routed:** If you select 1483 Routed as the WAN protocol, you cannot use the DHCP service. You need to enter the IP address, subnet mask, default gateway and DNS that is provided by your ISP.
-
- Select the Country: India and then select the service provider from the drop-down list. You can change the VPI/VCI values as instructed by your ISP.

DIGISOL www.digisol.com

ADSL2+ Wireless Broadband Router

Technical Support-1800 209 3444

For wireless configuration settings refer to steps mentioned on [page 17](#).

- Click '**Finish**' to save your settings and reboot the router. Once the settings are applied the following screen will appear.

The screenshot shows the web interface of a Digisol DG-BG4300NU router. The browser window is titled "DG-BG4300NU - Windows Internet Explorer" and the address bar shows "http://192.168.1.100/". The page has a red header with the Digisol logo and the model name "DG-BG4300NU". In the top right corner, it says "300Mbps Wireless ADSL2/2+ Broadband Router with 3G".

On the left side, there is a navigation menu with the following items: Device Info (selected), Summary, WAN, Statistics, Route, ARP, Advanced Setup, Wireless, Diagnostics, and Management.

The main content area is titled "Device Info" and contains the following information:

Board ID:	DG-BG4300NU
Build Timestamp:	131107_1801
Firmware Version:	1.00
Bootloader (CFE) Version:	1.0.38-114-86
DSL PHY and Driver Version:	A2pQ038L-224f
Wireless Driver Version:	6.30.102.7.cpe4.12107.0
Uptime:	00 0H 10M 12S

Below this table, it states: "This information reflects the current status of your WAN connection." and provides the following WAN connection details:

Line Rate - Upstream (Kbps):	256
Line Rate - Downstream (Kbps):	2048
LAN IPv4 Address:	192.168.1.100
LAN MAC Address:	02:10:18:01:00:01
Default Gateway:	ppp7
Primary DNS Server:	10.169.30.244
Secondary DNS Server:	10.170.30.245
LAN IPv6 ULA Address:	
Default IPv6 Gateway:	
Date/Times:	Thu Jan 1 00:10:12 1970

At the bottom of the page, there is a red text link: "Technical Support: 1800 209 3444". The browser status bar at the bottom shows "Done" and "Internet" with a 75% zoom level.

Transmitted	Displays the counters for transmitted pkts /bytes.

4-3 Route

4-3-1 Device Info Route

The below table shows the dynamic route entry/entries.

Device Info -- Route						
Flags: U - up, ! - reject, G - gateway, H - host, R - reinstate D - dynamic (redirect), M - modified (redirect).						
Destination	Gateway	Subnet Mask	Flag	Metric	Service	Interface
192.168.1.0	0.0.0.0	255.255.255.0	U	0		br0

4-3-2 Device Info ARP

The below table displays the ARP entries of devices connected to the router.

Device Info -- ARP			
IP address	Flags	HW Address	Device
192.168.1.8	Complete	d0:27:88:5e:bc:f2	br0
192.168.1.2	Complete	80:1f:02:11:f4:6c	br0

4-3-3 Device Info DHCP

Device Info -- DHCP Leases			
Hostname	MAC Address	IP Address	Expires In
ITLAPTOP	80:1f:02:11:f4:6c	192.168.1.2	23 hours, 46 minutes, 57 seconds
	18:20:32:58:77:f5	192.168.1.3	23 hours, 47 minutes, 18 seconds
MININT-7FD9U2S	00:1f:1f:f2:c9:3b	192.168.1.4	23 hours, 47 minutes, 37 seconds

Parameter	Description
Hostname	Displays PC / client name.
MAC Address	Displays MAC address of Host / PC.
IP Address	Displays IP address of Host /PC.
Expires In	Displays the DHCP Lease time remaining.

4-4 Advanced Setup

Click on the link and the following options will appear under “**Advanced Settings**”.

4-4-1 WAN Service

I) 1483 Bridged Mode

If you select 1483 Bridged as the WAN protocol, you can use the third party Dial-up software or Windows New Connection Wizard to configure the Internet dial-up access.

ATM Configuration	
VPI(0-255):	<input type="text" value="0"/>
VCI(32-65535):	<input type="text" value="35"/>
Encapsulation Mode:	<input type="radio"/> LLC <input type="radio"/> VC-Mux
Wan Service Setup	
Connection Type:	<input type="text" value="1483 Bridged"/>
<input type="button" value="Save"/>	

II) PPPoE Mode

The PPPoE mode will require the PPPoE Username and Password which is provided from the ISP.

ATM Configuration	
VPI(0-255):	<input type="text" value="0"/>
VCI(32-65535):	<input type="text" value="35"/>
Encapsulation Mode:	<input type="radio"/> LLC <input type="radio"/> VC-Mux
Wan Service Setup	
Connection Type:	<input type="text" value="PPPoE"/>
PPP Username:	<input type="text"/>
PPP Password:	<input type="text"/>
Confirm Password:	<input type="text"/>
Connection Mode:	<input type="radio"/> Always on <input type="radio"/> Connect on demand Max idle time <input type="text"/> minutes ([1-4320],0 means remain active at all time)
Authentication type:	<input type="text" value="AUTO_AUTH"/>
Enable IPV4:	<input checked="" type="checkbox"/>
Enable IPV6:	<input type="checkbox"/>
<input type="button" value="Save"/>	

III) 1483 Routed Mode

If you select 1483 Routed as the WAN protocol, you cannot use the DHCP service. You need to enter the IP address, subnet mask, default gateway and DNS that is provided by your ISP.

ATM Configuration

4-4-3 NAT

Below screenshot shows the options available under NAT.

4-4-3-1 Virtual Servers

Virtual server allows you to direct incoming traffic from the WAN side to the internal server with private IP address on the LAN side. The internal port is required if the external port needs to be converted to a different port number used by the server on the LAN side. A maximum 32 entries can be configured.

NAT -- Virtual Servers Setup

Virtual Server allows you to direct incoming traffic from WAN side (identified by Protocol and External port) to the Internal server with private IP address on the LAN side. The Internal port is required only if the external port needs to be converted to a different port number used by the server on the LAN side. A maximum 32 entries can be configured.

Server Name	External Port Start	External Port End	Protocol	Internal Port Start	Internal Port End	Server IP Address	WAN Interface	Remove

When you click on “Add” the following screen will appear.

NAT -- Virtual Servers

Select the service name, and enter the server IP address and click "Apply/Save" to forward IP packets for this service to the specified server. **NOTE: The "Internal Port End" cannot be modified directly. Normally, it is set to the same value as "External Port End". However, if you modify "Internal Port Start", then "Internal Port End" will be set to the same value as "Internal Port Start".**
 Remaining number of entries that can be configured:32

Parameter	Description
User Interface	Select the WAN interface on which the Port forwarding is required.
Service Name	Name of Port forwarding service.
External Port Start & External Port End	Port number accessible on public.
Protocol	Select TCP or UDP or both.
Internal Port Start & Internal Port End	Type the port number of the server for port forwarding.

4-4-3-2 Port Triggering

Port triggering is a way to automate port forwarding in which outbound traffic on predetermined ports ('triggering ports') causes inbound traffic to specific incoming ports to be dynamically forwarded to the initiating host, while the outbound ports are in use. This allows computers behind a NAT-enabled router on a local network to provide services that would normally require the computer to have a fixed address on the local network. Port triggering triggers can open an incoming port when a client on the local network makes an outgoing connection on a predetermined port or range of ports.

NAT -- Port Triggering Setup

Some applications require that specific ports in the Router's firewall be opened for access by the remote parties. Port Trigger dynamically opens up the 'Open Ports' in the firewall when an application on the LAN initiates a TCP/UDP connection to a remote party using the Triggering Ports. The Router allows the remote party from the WAN side to establish new connections back to the application on the LAN side using the 'Open Ports'. A maximum 32 entries can be configured.

Application Name	Trigger		Open			WAN Interface	Remove
	Protocol	Port Range	Protocol	Port Range			
				Start	End		

When you click on “Add” the following screen will appear.

NAT -- Port Triggering

Some applications such as games, video conferencing, remote access applications and others require that specific ports in the Router's firewall be opened for access by the applications. You can configure the port settings from this screen by selecting an existing application or creating your own (Custom application) and click "Save/Apply" to add it. **Remaining number of entries that can be configured:32**

4-4-3-3 DMZ Host

A DMZ (Demilitarized Zone) allows a single computer on your LAN to expose ALL of its ports to the Internet. Enter the IP address of computer as a DMZ (Demilitarized Zone) host with unrestricted Internet access. When doing this, the DMZ host is no longer behind the firewall.

NAT -- DMZ Host

The Broadband Router will forward IP packets from the WAN that do not belong to any of the applications configured in the Virtual Servers table to the DMZ host computer.

Enter the computer's IP address and click 'Apply' to activate the DMZ host.

Clear the IP address field and click 'Apply' to deactivate the DMZ host.

DMZ Host IP Address:

Enter the DMZ Host IP address which is the IP address of the local host. This feature sets a local host to be exposed to the Internet.

4-4-3-4 IP Address Map

Advanced users can use this feature for outgoing traffic, creating “**NAT IP MAPPING**” rules that divert all traffic that is destined for a certain IP address to a different IP address. Entries in this table allow you to configure one Global IP Pool for specified Local IP address from LAN.

NAT -- IP Address Mapping

Rule Type	Public IP Start	Public IP End	Local IP Start	Local IP End	Bind Wan Interface	Delete

When you click on “**Add**” the following screen will appear.

NAT --IP Address Mapping Setup

Server Name:

Select a Service: ▼

Local Start IP	Local End IP	Public Start IP	Public End IP

4-4-3-5 ALG

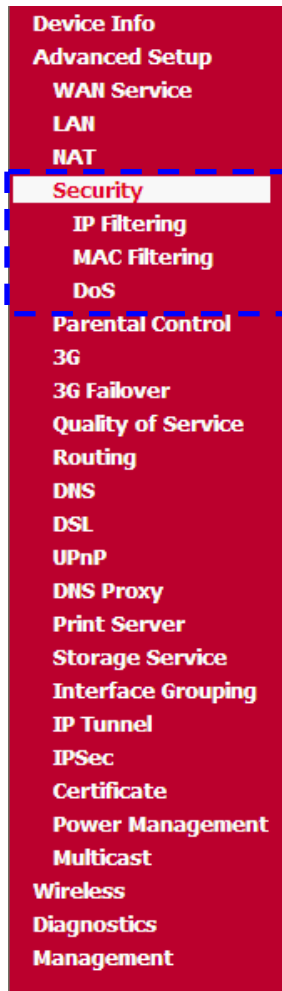

An application-level gateway (also known as ALG or application layer gateway) consists of a security component that augments a firewall or NAT employed in a computer network.

ALG

Select the ALG below.

- SIP ALG Enabled
- FTP ALG Enabled
- H323 ALG Enabled
- PPTP ALG Enabled
- RTSP ALG Enabled
- TFTP ALG Enabled

4-4-4 Security

4-4-4-1 IP Filtering

I) Outgoing IP filtering

By default all outgoing IP traffic from LAN is allowed, but some IP traffic can be blocked by setting up filters.

Outgoing IP Filtering Setup

By default, all outgoing IP traffic from LAN is allowed, but some IP traffic can be **BLOCKED** by setting up filters.

Choose Add or Remove to configure outgoing IP filters.

Filter Name	IP Version	Protocol	SrcIP/ PrefixLength	SrcPort	DstIP/ PrefixLength	DstPort	Remove
<div style="text-align: right; margin-right: 50px;"> <input type="button" value="Add"/> <input type="button" value="Remove"/> </div>							

Click on “**Add**”. The following screen will appear.

Add IP Filter -- Outgoing

The screen allows you to create a filter rule to identify outgoing IP traffic by specifying a new filter name and at least one condition below. All of the specified conditions in this filter rule must be satisfied for the rule to take effect. Click 'Apply/Save' to save and activate the filter.

Filter Name:

IP Version:

Protocol:

Source IP address[/prefix length]:

Source Port (port or port:port):

Destination IP address[/prefix length]:

Destination Port (port or port:port):

Parameter	Description
Filter Name	Any name for rule.
IP version	Select the IPV4 /IPV6.
Protocol	Select the protocol for which the rule is applied.
Source IP address/prefix length	Enter the source IP address.
Source Port	Enter the source port.
Destination IP address/prefix length	Enter the Destination IP address.
Destination Port	Enter the Destination port.

II) Incoming IP filtering

When the firewall is enabled on a WAN or LAN interface, all incoming traffic is blocked. However, some IP traffic can be accepted by setting up filters.

Incoming IP Filtering Setup

When the firewall is enabled on a WAN or LAN interface, all incoming IP traffic is BLOCKED. However, some IP traffic can be **ACCEPTED** by setting up filters.

Choose Add or Remove to configure incoming IP filters.

Filter Name	Interfaces	IP Version	Protocol	SrcIP/ PrefixLength	SrcPort	DstIP/ PrefixLength	DstPort	Remove
<div style="display: flex; justify-content: center; gap: 20px;"> Add Remove </div>								

Click on “**Add**”. The following screen will appear.

Add IP Filter -- Incoming

The screen allows you to create a filter rule to identify incoming IP traffic by specifying a new filter name and at least one condition below. All of the specified conditions in this filter rule must be satisfied for the rule to take effect. Click 'Apply/Save' to save and activate the filter.

Filter Name:

IP Version:

Protocol:

Source IP address[/prefix length]:

Source Port (port or port:port):

Destination IP address[/prefix length]:

Destination Port (port or port:port):

WAN Interfaces (Configured in Routing mode and with firewall enabled) and LAN Interfaces

Select All

br0/br0

Apply/Save

4-4-4-2 MAC Filtering

4-4-4-3 DoS

A denial-of-service attack (DoS attack) is an attempt to make a computer resource unavailable to its intended users.

Enable DoS Prevention to detect and prevent denial of service attacks through automatic rate filtering or rules to protect legitimate users during the DoS attacks.

DoS

Select the DoS below.

- TCP SYNcookies
- SYN Flood (1-10)
- Ping Of Death/Ping Flood (1-10)
- Port Scanning (1-10)

Parameter	Description
TCP SYNcookies	Will block the TCP Sync cookies when enabled.
SYN Flood	Will block the SYN flood when enabled.
Ping of Death/Ping Flood	Will block ping from source IP when enabled.
Port Scanning	Will block Port scanning from source when enabled.

4-4-5 Parental Control

If you want to allow access to Internet in the specific time, click on Parental Control and the following page appears. It is used to configure the filtered URL and domain. You can also add/delete the excluded IP, from which packets free from these URL filtering rules.

4-4-5-1 Time Restriction

This feature adds time of restriction to a special LAN device to the router. The browser’s MAC address automatically displays the MAC address of the LAN device when the browser is running.

To restrict other LAN devices, click “**other MAC Address**” button and enter the MAC address of the other LAN device. To find out the MAC address of a Windows based PC, go to command window and type “**ipconfig/all**”.

Access Time Restriction -- A maximum 16 entries can be configured.

Username	MAC	Mon	Tue	Wed	Thu	Fri	Sat	Sun	Start	Stop	Remove

Click on “Add”. The below given screen will appear.

Access Time Restriction

This page adds time of day restriction to a special LAN device connected to the Router. The 'Browser's MAC Address' automatically displays the MAC address of the LAN device where the browser is running. To restrict other LAN device, click the "Other MAC Address" button and enter the MAC address of the other LAN device. To find out the MAC address of a Windows based PC, go to command window and type "ipconfig /all".

User Name

Browser's MAC Address

Other MAC Address
(00:13:02:00:00:00:00:00)

Days of the week

	Mon	Tue	Wed	Thu	Fri	Sat	Sun
Click to select	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Start Blocking Time (hh:mm)

End Blocking Time (hh:mm)

Parameter	Description
Browser's MAC address	Enter the MAC address of PC to be restricted.
Other MAC address	Enter the MAC address of PC to be restricted.
Days of the week	Select the days for restricted access.
Start Blocking time	Select the time for restriction.
End Blocking time	Select the time for restriction.

4-4-5-2 URL Filter

The URL Blocking is the web filtering solution. The firewall has the ability to block access to specific web URLs based on string matches. This can allow large number of URLs to be blocked by specifying only a FQDN (such as tw.yahoo.com). The URL Blocking enforces a Web usage policy to control content downloaded from, and uploaded to the Web.

URL Filter -- Please select the list type first then configure the list entries. Maximum 100 entries can be configured.

URL List Type: Exclude Include

Address	Port	Remove
---------	------	--------

Please select the list type first then configure the list entries. Maximum 100 entries can be configured.

Click on “Add”. The below given screen will appear. Enter the URL address and port number to add the entry to the URL filter.

Parental Control -- URL Filter Add

Enter the URL address and port number then click "Apply/Save" to add the entry to the URL filter.

URL Address:

Port Number: (Default 80 will be applied if leave blank.)

4-4-6 3G

This page allows the user to set the 2G and 3G parameters of the USB Datacard with an active SIM plugged to the USB port of the router. These Parameters are provided by the 2G/3G internet service provider. Also check the 3G dongle compatibility list on the website or call Digisol technical support. Basically username, password, dial Number and APN code is required. Some ISP's do not require username and password. The below parameters may need to be confirmed with ISP.

NOTE: Switch off the router to plug/unplug USB 2G/3G Dongle.

3G Setting

Connection Status: Disconnected

Datacard: None

ISP: None

Signal Strength: None

Enable

Username:

Password:

APN code:

Pin code:

Dialup Number:

Baud Rate:

LCPEchoFailure:

Network Preference:

Automatic (3G preferred)

3G Only

2G Only

4-4-6-1 3G Failover

On this page, the user or administrator can set WAN type as Primary or Backup Uplink.

Primary Uplink

Primary Uplink:

Backup Uplink:

Backup Mechanism

Enable Failback

Probe Criterion: Probing failed after consecutive times

Probe Cycle: Every seconds

Probe Rule :

- ping gateway
- ping DNS
- ping host

Parameter	Description
Primary Uplink	Set the preferred WAN type
Backup Uplink	Set the backup/secondary WAN type
Backup mechanism	The failover settings can be edited.

Note: It is not recommended to change the Backup mechanism settings

4-4-7 Quality Of Service

The QoS is enforced by the QoS rules in the QoS table. A QoS rule contains two configuration blocks:

Traffic Classification and Action. The Traffic Classification enables you to classify packets on the basis of various fields in the packet and perhaps the physical ingress port. The Action enables you to assign the strict priority level and mark some fields in the packet that matches the Traffic Classification rule. You can configure any or all fields as needed in these two QoS blocks for a QoS rule.

Check the “**Enable QoS**” checkbox as shown below. Then choose a default DSCP mark to automatically mark incoming traffic without reference to a particular classifier. Click on “**Apply/Save**” button to save it.

QoS -- Queue Management Configuration

If Enable QoS checkbox is selected, choose a default DSCP mark to automatically mark incoming traffic without reference to a particular classifier. Click 'Apply/Save' button to save it.

Note: If Enable QoS checkbox is not selected, all QoS will be disabled for all interfaces.

Note: The default DSCP mark is used to mark all egress packets that do not match any classification rules.

Enable QoS

Select Default DSCP Mark:

4-4-7-1 QoS Queue

QoS Queue Setup

In ATM mode, maximum 8 queues can be configured.

In PTM mode, maximum 8 queues can be configured.

For each Ethernet interface, maximum 4 queues can be configured.

For each Ethernet WAN interface, maximum 4 queues can be configured.

To add a queue, click the **Add** button.

To remove queues, check their remove-checkboxes, then click the **Remove** button.

The **Enable** button will scan through every queues in the table. Queues with enable-checkbox checked will be enabled. Queues with enable-checkbox un-checked will be disabled.

The enable-checkbox also shows status of the queue after page reload.

Note that if WMM function is disabled in Wireless Page, queues related to wireless will not take effects.

The QoS function has been disabled. Queues would not take effects.

Name	Key	Interface	Qid	Prec/Alg/Wght	DSL Latency	PTM Priority	Shaping Rate(bps)	Burst Size(bytes)	Enable	Remove
WMM Voice Priority	1	wlan0	8	1/SP					Enabled	
WMM Voice Priority	2	wlan0	7	2/SP					Enabled	
WMM Video Priority	3	wlan0	6	3/SP					Enabled	
WMM Video Priority	4	wlan0	5	4/SP					Enabled	
WMM Best Effort	5	wlan0	4	5/SP					Enabled	
WMM Background	6	wlan0	3	6/SP					Enabled	
WMM Background	7	wlan0	2	7/SP					Enabled	
WMM Best Effort	8	wlan0	1	8/SP					Enabled	

For each Ethernet interface, maximum 4 queues can be configured. For each Ethernet WAN interface maximum 4 queues can be configured.

The “**Enable**” button will scan through every queue in the table.

Parameter	Description
Name	Name of the QoS Rule.
Key	Enter the key.
Interface	Select Interface on which the QoS rule is to be applied.
Qid	Enter the QID.
Prec/Alg/Wght	Mention the prec/alg/wght.
DSL Latency	Display the WAN Path.
PTM priority	Define the PTM priority.
Shaping Rate (bps)	Type the shaping rate.
Burst Size (bytes)	Type the Burst size
Enable	Displays the Enabled Status if enabled.
Remove	Select the checkbox to remove the entry.

Note: If the WMM function is disabled in the wireless page, queues related to wireless will not take effect.

Click on “**Add**”. The below given screen will appear. This screen allows you to create a QoS queue and add it to a selected layer2 interface. Enter the name and interface of the QoS queue as shown below.

QoS Queue Configuration

This screen allows you to configure a QoS queue and add it to a selected layer2 interface.

Name:

Enable: Enable

Interface:

4-4-7-2 QOS Classification

QoS Classification Setup -- maximum 32 rules can be configured.

To add a rule, click the **Add** button.
 To remove rules, check their remove-checkboxes, then click the **Remove** button.
 The **Enable** button will scan through every rules in the table. Rules with enable-checkbox checked will be enabled. Rules with enable-checkbox un-checked will be disabled.
 The enable-checkbox also shows status of the rule after page reload.
 If you disable WMM function in Wireless Page, classification related to wireless will not take effects

The QoS function has been disabled. Classification rules would not take effects.

		CLASSIFICATION CRITERIA											CLASSIFICATION RESULTS						
Class Name	Order	Class Intf	Ether Type	SrcMAC/ Mask	DstMAC/ Mask	SrcIP/ PrefixLength	DstIP/ PrefixLength	Proto	SrcPort	DstPort	DSCP Check	802.1P Check	Queue Key	DSCP Mark	802.1P Mark	Rate Limit (kbps)	Enable	Remove	
<input type="button" value="Add"/> <input type="button" value="Enable"/> <input type="button" value="Remove"/>																			

Note: If the QOS function has been disabled, then the classification rules would not take effect.

Click on “**Add**” button to add a rule. The below given screen will appear. By entering the settings in this page, you can create traffic class rule to classify the ingress traffic into the priority queue and optionally mark the DSCP or Ethernet priority of the packet. Click “**Apply/Save**” button to save and activate the rule.

Add Network Traffic Class Rule

This screen creates a traffic class rule to classify the ingress traffic into a priority queue and optionally mark the DSCP or Ethernet priority of the packet. Click 'Apply/Save' to save and activate the rule.

Traffic Class Name:

Rule Order:

Rule Status:

Specify Classification Criteria (A blank criterion indicates it is not used for classification.)

Class Interface:

Ether Type:

Source MAC Address:

Source MAC Mask:

Destination MAC Address:

Destination MAC Mask:

Specify Classification Results (A blank value indicates no operation.)

Specify Class Queue (Required):

- Packets classified into a queue that exit through an interface for which the queue is not specified to exist, will instead egress to the default queue on the interface.

Mark Differentiated Service Code Point (DSCP):

Mark 802.1p priority:

- Class non-vlan packets egress to a non-vlan interface will be tagged with VID 0 and the class rule p-bits.
 - Class vlan packets egress to a non-vlan interface will have the packet p-bits re-marked by the class rule p-bits. No additional vlan tag is added.
 - Class non-vlan packets egress to a vlan interface will be tagged with the interface VID and the class rule p-bits.
 - Class vlan packets egress to a vlan interface will be additionally tagged with the packet VID, and the class rule p-bits.

Set Rate Limit: [Kbits/s]

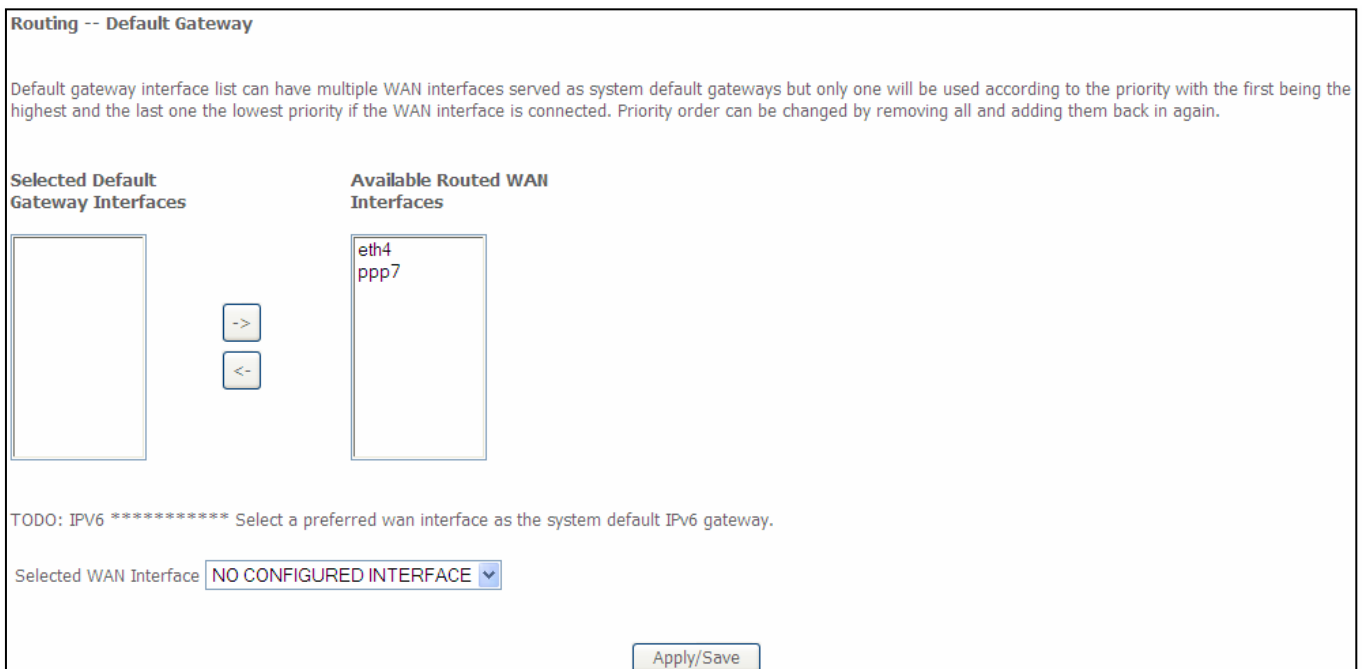

Parameter	Description
Traffic Class Name	Name of the Traffic Class.
Rule Order	Select the Rule Order.
Rule Status	Enable or Disable the Rule Status.
Class Interface	Select the Traffic Class Interface on which rule is to be applied.
Ether Type	Select the Ether Type as required.
Source MAC Address	Enter the Source MAC Address.
Destination MAC address	Enter the Destination MAC address.
Destination MAC Mask	Enter the Destination MAC Mask.
Specify Class Queue	Enter the Class Queue.
Mark DSCP	Select the DSCP from the List.
Mark 802.1p priority	Select the Priority from 0-7.
Set Rate Limit	Set the Rate limit here.

4-4-8 Routing

4-4-8-1 Default Gateway

Default gateway interface can have WAN interfaces served as system default gateways but only one will be used according to the priority with the first being the highest and the last one of the lowest priority if the WAN interface is connected. Priority order can be changed by removing all and adding them back again.

4-4-8-2 Static route

Routing -- Static Route (A maximum 32 entries can be configured)

NOTE: For system created route, the 'Remove' checkbox is disabled.

IP Version	DstIP/ PrefixLength	Gateway	Interface	metric	Remove
<input type="button" value="Add"/> <input type="button" value="Remove"/>					

Click on “**Add**”. The below given screen will appear. Here enter the destination network address, subnet mask, gateway AND/OR available WAN interface then click on “**Apply/Save**” to add the entry to the routing table.

Routing -- Static Route Add

Enter the destination network address, subnet mask, gateway AND/OR available WAN interface then click "Apply/Save" to add the entry to the routing table

IP Version:

Destination IP address/prefix length:

Interface:

Gateway IP Address:

(optional: metric number should be greater than or equal to zero)

Metric:

Parameter	Description
IP Version	Select the Internet Protocol version IPV4/IPV6.
Destination IP address/prefix length	Enter Destination IP or/and Prefix length. (IPV6)
Interface	Select the WAN/LAN interface.
Gateway IP address	Enter the IP address.
Metric	Enter the numerical value (= or > 0).

4-4-8-3 Policy Routing

Policy Routing Setting -- A maximum 7 entries can be configured.

Policy Name	Source IP	LAN Port	WAN	Default GW	Remove
<input type="button" value="Add"/> <input type="button" value="Remove"/>					

Click on “**Add**”. The below given screen will appear.

Here enter the policy name, policies and WAN interface. Then click “**Apply/Save**” button to add the entry to the policy routing table.

Policy Routing Setup
 Enter the policy name, policies, and WAN interface then click "Apply/Save" to add the entry to the policy routing table.
 Note: If selected "IPoE" as WAN interface, default gateway must be configured.

Policy Name:

Physical LAN Port:

Source IP:

Use Interface:

Default Gateway IP:

Parameter	Description
Policy Name	Enter the name of Policy.
Physical LAN port	Select the LAN port.
Source IP	Enter the Source IP address.
Use Interface	Select the Interface.
Default Gateway IP	Type the IP of the default gateway.

4-4-8-4 RIP

To activate RIP for the WAN interface, select the desired RIP version and operation and check the “**Enabled**” checkbox. To stop RIP on the WAN interface, uncheck the “**Enabled**” checkbox. Click the “**Apply/Save**” button to start/stop RIP and save the configuration.

Note: RIP cannot be configured on the WAN interface which has NAT enabled (such as PPPoE).

Routing -- RIP Configuration

NOTE: RIP CANNOT BE CONFIGURED on the WAN interface which has NAT enabled (such as PPPoE).

To activate RIP for the WAN Interface, select the desired RIP version and operation and place a check in the 'Enabled' checkbox. To stop RIP on the WAN Interface, uncheck the 'Enabled' checkbox. Click the 'Apply/Save' button to star/stop RIP and save the configuration.

Interface	Version	Operation	Enabled
WAN Interface not exist for RIP.			

4-4-9 DNS

4-4-9-1 DNS Server

DNS Server Configuration

Select DNS Server Interface from available WAN interfaces OR enter static DNS server IP addresses for the system. In ATM mode, if only a single PVC with IPoA or static IPoE protocol is configured, Static DNS server IP addresses must be entered.
DNS Server Interfaces can have multiple WAN interfaces served as system dns servers but only one will be used according to the priority with the first being the highest and the last one the lowest priority if the WAN interface is connected. Priority order can be changed by removing all and adding them back in again.

Select DNS Server Interface from available WAN interfaces:

Selected DNS Server Interfaces

Available WAN Interfaces

eth4
ppp7

Use the following Static DNS IP address:

Primary DNS server:

Secondary DNS server:

TODO: IPV6 ***** Select the configured WAN interface for IPv6 DNS server information OR enter the static IPv6 DNS server Addresses.
 Note that selecting a WAN interface for IPv6 DNS server will enable DHCPv6 Client on that interface.

Obtain IPv6 DNS info from a WAN interface:

WAN Interface selected:

Use the following Static IPv6 DNS address:

Primary IPv6 DNS server:

Secondary IPv6 DNS server:

4-4-9-2 Dynamic DNS

The Dynamic DNS feature allows you to register your device with a DNS server and access your device each time using the same host name. The Dynamic DNS page allows you to add/remove the Dynamic DNS feature.

Dynamic DNS

The Dynamic DNS service allows you to alias a dynamic IP address to a static hostname in any of the many domains, allowing your Broadband Router to be more easily accessed from various locations on the Internet.

Choose Add or Remove to configure Dynamic DNS.

Hostname	Username	Service	Interface	Remove
----------	----------	---------	-----------	--------

Click on “**Add**”. The below given screen will appear.

Add Dynamic DNS

This page allows you to add a Dynamic DNS address from DynDNS.org or TZO.

D-DNS provider

Hostname

Interface

DynDNS Settings

Username

Password

Parameter	Description
D-DNS provider	Select your DDNS Service Provider.
Hostname	Enter the hostname configured in your DDNS Service Provider Account.
Interface	Select the WAN Interface Type.
User Name	Enter the User Name of your DDNS account.
Password	Enter the Password of your DDNS account.

4-4-10 DSL

This page allows you to set the ADSL modulation. It is recommended, not to change anything unless required/suggested by the ADSL service provider. **CAUTION: Wrong selection of modulation may make the router ADSL link unstable.**

DSL Settings

Select the modulation below.

- G.Dmt Enabled
- G.lite Enabled
- T1.413 Enabled
- ADSL2 Enabled
- AnnexL Enabled
- ADSL2+ Enabled
- AnnexM Enabled

Select the phone line pair below.

- Inner pair
- Outer pair

Capability

- Bitswap Enable
- SRA Enable

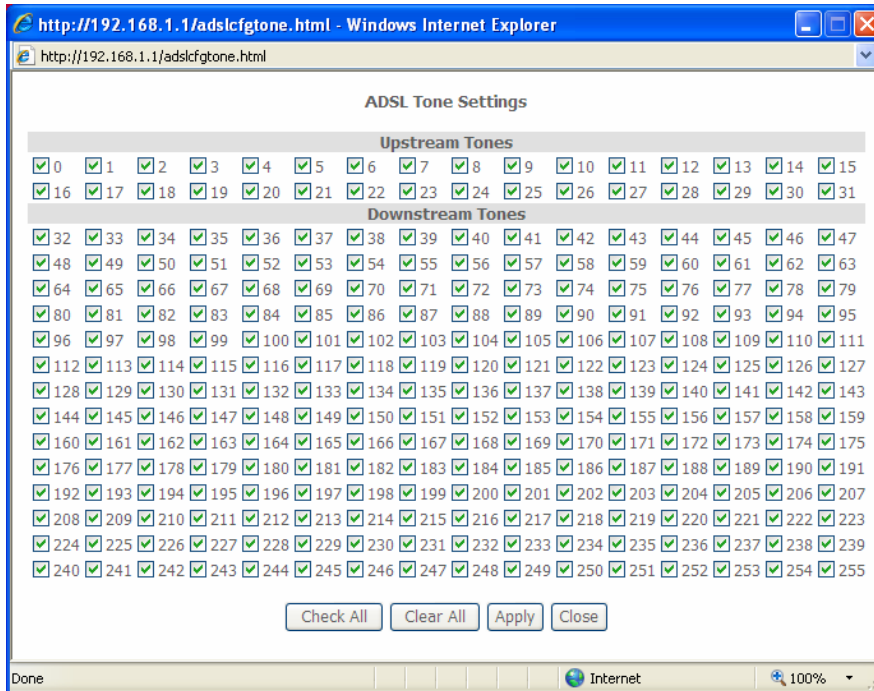

Click on “**Advanced Settings**”. The below given screen will appear.

DSL Advanced Settings

Select the test mode below.

- Normal
- Reverb
- Medley
- No retrain
- L3

Click on “**Tone Selection**”. The screen shown below will appear.

Note: If you do not have much knowledge of ADSL tone settings, it is advised not to change these settings.

4-4-11 UPnP

Check mark “**Enable UPnP**” to enable UPnP service.

UPnP Configuration

NOTE: UPnP is activated only when there is a live WAN service with NAT enabled.

Enable UPnP

4-4-12 DNS Proxy

Check mark “**Enable DNS Proxy**” to enable DNS Proxy. Enter the Host name of the Router and the domain name of the LAN network.

DNS Proxy Configuration

Enable DNS Proxy

Host name of the Broadband Router:

Domain name of the LAN network:

4-4-13 Storage Service

This page will list the USB Mass storage when connected (tested up to 16 GB).
The storage service allows you to use storage devices with the modem to be more easily accessed.

Storage Service

The Storage service allows you to use Storage devices with modem to be more easily accessed

Volumename	FileSystem	Total Space	Used Space
------------	------------	-------------	------------

Note:

Windows System: Go to START>RUN and type '\\(IP Address)'

For eg:type '\\192.168.1.1'and press Enter key.Default username/password is admin/admin

4-4-14 Interface Grouping

Interface grouping supports multiple ports and bridging groups. Each group will perform as an independent network. To support this feature, you must create mapping groups with appropriate LAN and WAN interfaces using the Add button. The remove button will remove the grouping and add the ungrouped interfaces to the default group. Only the default group has IP interface.

Interface Grouping -- A maximum 16 entries can be configured

Interface Grouping supports multiple ports to PVC and bridging groups. Each group will perform as an independent network. To support this feature, you must create mapping groups with appropriate LAN and WAN interfaces using the Add button. The Remove button will remove the grouping and add the ungrouped interfaces to the Default group. Only the default group has IP interface.

Group Name	Remove	WAN Interface	LAN Interfaces	DHCP Vendor IDs
Default			LAN4	
			LAN3	
			LAN2	
			LAN1	
			wlan0	

Click on “Add”. The following screen will appear.

Interface grouping Configuration

To create a new interface group:

1. Enter the Group name and the group name must be unique and select either 2. (dynamic) or 3. (static) below:
2. If you like to automatically add LAN clients to a WAN Interface in the new group add the DHCP vendor ID string. By configuring a DHCP vendor ID string any DHCP client request with the specified vendor ID (DHCP option 60) will be denied an IP address from the local DHCP server.
3. Select interfaces from the available interface list and add it to the grouped interface list using the arrow buttons to create the required mapping of the ports. **Note that these clients may obtain public IP addresses**
4. Click Apply/Save button to make the changes effective immediately

IMPORTANT If a vendor ID is configured for a specific client device, please REBOOT the client device attached to the modem to allow it to obtain an appropriate IP address.

MLD Configuration

Enter MLD protocol (IPv6 Multicast) configuration fields if you want modify default values shown below.

Default Version:

Query Interval:

Query Response Interval:

Last Member Query Interval:

Robustness Value:

Maximum Multicast Groups:

Maximum Multicast Data Sources (for mldv3):

Maximum Multicast Group Members:

Fast Leave Enable:

LAN to LAN (Intra LAN) Multicast Enable:

Parameter	Description
Default Version	Enter the Default Version Value.
Query Interval	This parameter indicates the query interval. It is the interval in seconds (s) between general queries sent by the querier. Default is 60 sec.
Query Response Interval	This parameter indicates the query response interval. It is the maximum response time in seconds for an IGMP host in reply to general queries. By default, the value is set to 100.
Last Member query interval	Enter the last member query interval.
Robustness value	The IGMP robustness variable provides fine-tuning to allows for expected packet loss on a subnet.
Maximum multicast groups	Define the Maximum multicast group/groups.
Maximum multicast data sources	Define the Maximum multicast data sources.
Fast leave enable	When you enable IGMP fast-leave processing, the router immediately removes a port when it detects an IGMP version 2 leave message on that port.
LAN to LAN multicast enable	Enable or disable as required.
Membership join Immediate	Enable or Disable membership join immediate.

4-5 Wireless

4-5-1 Basic

This page allows you to configure basic features of the wireless LAN interface. You can enable or disable the wireless LAN interface, hide the network from active scans, set the wireless network name and restrict the channel set based on country requirements.

Wireless -- Basic

This page allows you to configure basic features of the wireless LAN interface. You can enable or disable the wireless LAN interface, hide the network from active scans, set the wireless network name (also known as SSID) and restrict the channel set based on country requirements.
Click "Apply/Save" to configure the basic wireless options.

Enable Wireless

Hide Access Point

Clients Isolation

Disable WMM Advertise

Enable Wireless Multicast Forwarding (WMF)

SSID:

BSSID: 02:10:18:01:00:02

Country:

Max Clients:

Wireless - Guest/Virtual Access Points:

Enabled	SSID	Hidden	Isolate Clients	Disable WMM Advertise	Enable WMF	Max Clients	BSSID
<input type="checkbox"/>	<input type="text" value="DIGISOL1"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="16"/>	N/A
<input type="checkbox"/>	<input type="text" value="DIGISOL2"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="16"/>	N/A
<input type="checkbox"/>	<input type="text" value="DIGISOL3"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="text" value="16"/>	N/A

Parameter	Description
Enable wireless	Use this option to turn ON/OFF Wi-Fi of the router.
Hide access point	Disable SSID Broadcast.
Clients Isolation	Select this option to Enable Wireless client isolation.
Disable WMM Advertise	Enable/Disable WMM Advance feature.
Enable wireless multicast forwarding (WMF)	Enable/Disable WMF feature.
SSID	Enter a name to your Wi-Fi network.
BSSID	Displays the MAC ID.
Country	Select the country.
Max Clients	Enter the Max Wi-Fi clients.

4-5-2 Security

This page allows you to configure the security features of the wireless LAN interface.

wireless -- Security

This page allows you to configure security features of the wireless LAN interface.
 You may setup configuration manually
 OR
 through WiFi Protected Setup(WPS)
 Note: When both STA PIN and Authorized MAC are empty, PBC is used. If Hide Access Point enabled or Mac filter list is empty with "allow" chosen, WPS2 will be disabled

WPS Setup

Enable WPS Enabled

Add Client (This feature is available only when WPA-PSK(WPS1), WPA2 PSK or OPEN mode is configured)
 Enter STA PIN Use AP PIN Add Enrollee
 [Help](#)

Set Authorized Station MAC [Help](#)

Set WPS AP Mode Configured

Setup AP (Configure all security settings with an external registrar)

Device PIN [Help](#)

Manual Setup AP

You can set the network authentication method, selecting data encryption, specify whether a network key is required to authenticate to this wireless network and specify the encryption strength. Click "Apply/Save" when done.

Select SSID: DIGISOL

Network Authentication: Open

WEP Encrvption: Disabled

Parameter	Description
Enable WPS	Select to enable WPS.
Add Client	Input Station Pin from Client.
Set Authorized station MAC	Input Authorized Station MAC: xx:xx:xx:xx:xx:xx
Set WPS AP mode	Set the AP Mode.
Device PIN	Device Pin is generated by AP.
Select SSID	Select the wireless network.
Network Authentication	Select authentication method.
WEP Encryption	Enter the WEP Key if WEP Encryption is selected.

4-5-3 MAC Filter

The MAC filtering feature allows you to define rules to allow or deny frames through the device based on source MAC address, destination MAC address and traffic direction.

Wireless -- MAC Filter

Select SSID: ▼

MAC Restrict Mode: Disabled Allow Deny Note: If 'allow' is choosed and mac filter is empty, WPS will be disabled

MAC Address Remove

Click on “**Add**”. Enter the MAC address below that you wish to add to the wireless MAC address filters.

Wireless -- MAC Filter

Enter the MAC address and click "Apply/Save" to add the MAC address to the wireless MAC address filters.

MAC Address:

4-5-4 Wireless Bridge

This page allows you to configure wireless bridge features of the wireless LAN interface. You can select wireless bridge to disable access point functionality.

Wireless -- Bridge

This page allows you to configure wireless bridge features of the wireless LAN interface. You can select Wireless Bridge (also known as Wireless Distribution System) to disable access point functionality. Selecting Access Point enables access point functionality. Wireless bridge functionality will still be available and wireless stations will be able to associate to the AP. Select Disabled in Bridge Restrict which disables wireless bridge restriction. Any wireless bridge will be granted access. Selecting Enabled or Enabled(Scan) enables wireless bridge restriction. Only those bridges selected in Remote Bridges will be granted access. Click "Refresh" to update the remote bridges. Wait for few seconds to update. Click "Apply/Save" to configure the wireless bridge options.

AP Mode: Access Point

Bridge Restrict: Disabled

Refresh
Apply/Save

4-5-5 Advanced

This page allows you to configure advanced features of the wireless LAN interface. You can select a particular channel on which to operate, force the transmission rate to a particular speed, set the fragmentation threshold, set the RTS threshold, set the wakeup interval for clients in power-save mode, set the beacon interval for the access point.

This page allows you to configure advanced features of the wireless LAN interface. You can select a particular channel on which to operate, force the transmission rate to a particular speed, set the fragmentation threshold, set the RTS threshold, set the wakeup interval for clients in power-save mode, set the beacon interval for the access point, set XPress mode and set whether short or long preambles are used. Click "Apply/Save" to configure the advanced wireless options.

5 Management

5-1 Settings

5-1-1 Backup

Click on “**Backup settings**” button and the following screen will appear. Click on the **save** button to save the config file on your PC.

5-1-2 Update

Click on “**Browse**” to upload a new config file on the router. Then click on “**Update Settings**”.

Tools -- Update Settings

Update Broadband Router settings. You may update your router settings using your saved files.

Settings File Name:

5-1-3 Restore Default

Click on the “**Restore Default Settings**” button to restore the unit to its default settings.

Tools -- Restore Default Settings

Restore Broadband Router settings to the factory defaults.

5-2 System Log

The system log dialog allows you to view the system log and configure the system log options.

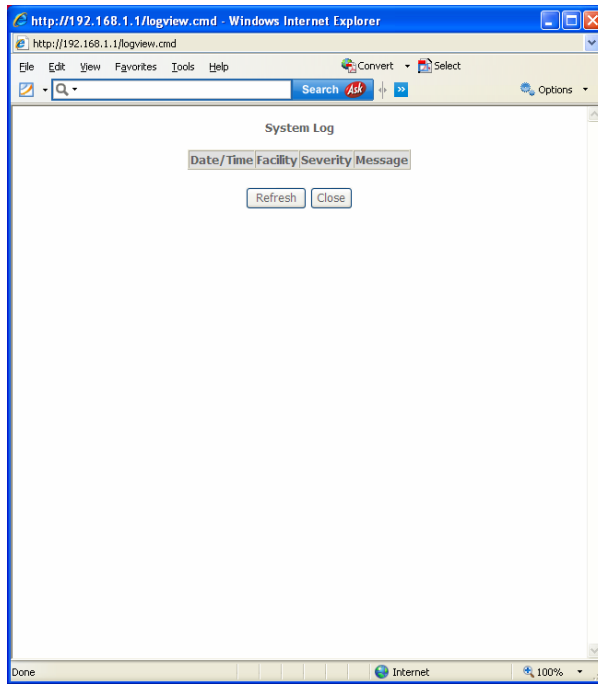

System Log

The System Log dialog allows you to view the System Log and configure the System Log options.

Click "View System Log" to view the System Log.

Click "Configure System Log" to configure the System Log options.

Click on “**View system log**”. The screen shown below will appear.

Click on “**Configure System Log**”. The screen shown below will appear.

System Log -- Configuration

If the log mode is enabled, the system will begin to log all the selected events. For the Log Level, all events above or equal to the selected level will be logged. For the Display Level, all logged events above or equal to the selected level will be displayed. If the selected mode is 'Remote' or 'Both', events will be sent to the specified IP address and UDP port of the remote syslog server. If the selected mode is 'Local' or 'Both', events will be recorded in the local memory.

Select the desired values and click 'Apply/Save' to configure the system log options.

LOG: Disable Enable

Log Level: ▾

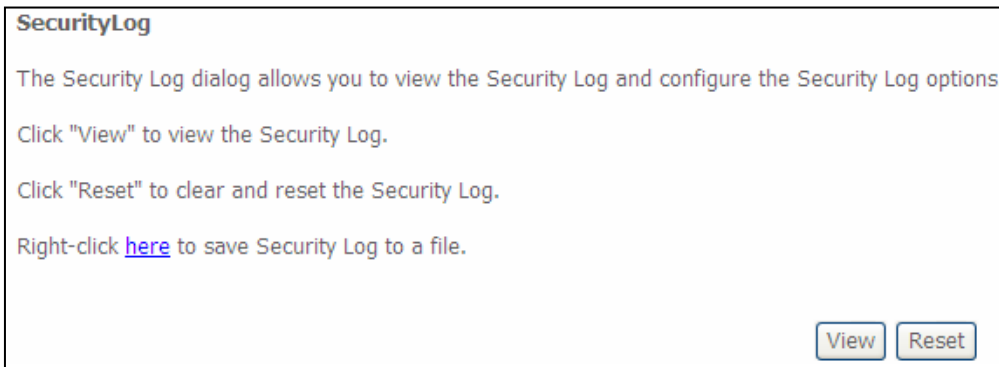

Display Level: ▾

Mode: ▾

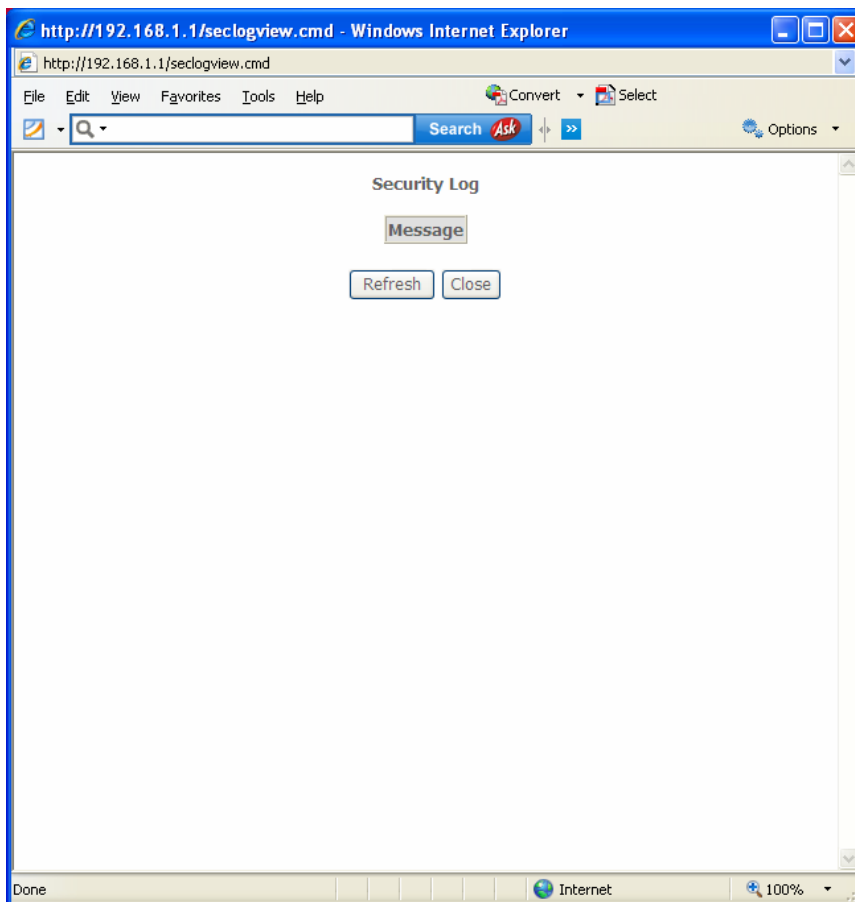

Parameter	Description
Log level	Select the Log Level.
Display level	Select the Display Level.
Mode	Select mode as Local or Remote.

5-3 Security Log

The security log dialog allows you to view the security log and configure the security log options.

Click on “**View**”. The screen shown below will appear.

5-4 TR-069 Client

TR-069 is a protocol for communication between a CPE and Auto-Configuration Server (ACS). The CPE TR-069 configuration should be well defined to be able to communicate with the remote ACS.

TR-069 client - Configuration

WAN Management Protocol (TR-069) allows a Auto-Configuration Server (ACS) to perform auto-configuration, provision, collection, and diagnostics to this device.

Select the desired values and click "Apply/Save" to configure the TR-069 client options.

Inform Disable Enable

Inform Interval:

ACS URL:

ACS User Name:

ACS Password:

WAN Interface used by TR-069 client:

Display SOAP messages on serial console Disable Enable

Connection Request Authentication

Connection Request User Name:

Connection Request Password:

Connection Request URL:

Parameter	Description
Inform interval	Enter the "Inform Interval", default value is 300.
ACS URL	Enter ACS server IP.
ACS user name	Enter the username.
ACS password	Enter the password.
WAN interface used by TR-069 client	Select the WAN Interface.
Display SOAP messages on serial console	Enable or disable as required (check with ISP).
Connection Request Authentication	Select or deselect as required.
Connection Request User name	Type the username.
Connection Request Password	Type the password.
Connection request URL	Type the URL of server.

5-5 Internet time

This page allows you to synchronize the internet time with the router.

The below parameters will help you to configure the NTP server details on the router which will enable the router time to sync with the global internet time. This will help to enable the time stamp in system logs.

Time settings

This page allows you to the modem's time configuration.

Automatically synchronize with Internet time servers

First NTP time server:

Second NTP time server:

Third NTP time server:

Fourth NTP time server:

Fifth NTP time server:

Time zone offset:

5-6 Access Control

5-6-1 Passwords

Access to your broadband router is controlled through three user accounts: admin, support and user. The user name “**admin**” has unrestricted access to change and view configuration of your broadband router.

The user name “**support**” is used to allow an ISP technician to access you broadband router for maintenance and run diagnostics.

The user name “**user**” can access the broadband router, view configuration settings and statistics, as well as update the router’s software.

Below you can enter up to 16 characters and click “**Apply/Save**” button to change or create passwords.

Access Control -- Passwords

Access to your broadband router is controlled through three user accounts: admin,support, and user.

The user name "admin" has unrestricted access to change and view configuration of your Broadband Router.

The user name "support" is used to allow an ISP technician to access your Broadband Router for maintenance and to run diagnostics.

The user name "user" can access the Broadband Router, view configuration settings and statistics, as well as, update the router's software.

Use the fields below to enter up to 16 characters and click "Apply/Save" to change or create passwords. Note: Password cannot contain a space.

User Name:

Old Password:

New Password:

Confirm Password:

5-6-2 Services

You can enable or disable the following list of services available in the access control list as shown below.

Access Control -- Services

A Service Control List ("SCL") enables or disables services from being used.

Services	LAN	WAN
FTP	<input checked="" type="checkbox"/> Enable	<input type="checkbox"/> Enable
HTTP	<input checked="" type="checkbox"/> Enable	<input type="checkbox"/> Enable
ICMP	Enable	<input type="checkbox"/> Enable
SSH	<input checked="" type="checkbox"/> Enable	<input type="checkbox"/> Enable
TELNET	<input checked="" type="checkbox"/> Enable	<input type="checkbox"/> Enable
TFTP	<input checked="" type="checkbox"/> Enable	<input type="checkbox"/> Enable

5-6-3 IP Addresses

The IP address Access control mode, if enabled, permits access to local management from IP addresses contained in the access control list. If the access control mode is disabled, the system will not validate IP addresses for incoming packets.

Access Control -- IP Address

The IP Address Access Control mode, if enabled, permits access to local management services from IP addresses contained in the Access Control List. If the Access Control mode is disabled, the system will not validate IP addresses for incoming packets. The services are the system applications listed in the Service Control List

Access Control Mode: Disable Enable

IP Address	Subnet Mask	Remove
------------	-------------	--------

Click on “**Add**”. The following screen will appear. Enter the IP address.

Add IP Addresses

Enter the IP address of the management station permitted to access the local management services, and click "Apply/Save".

IP Address:

Subnet Mask:

5-7 Update Software

Click on the “**Update Software**” button to upgrade the firmware.

Tools -- Update Software

Step 1: Obtain an updated software image file from your ISP.

Step 2: Enter the path to the image file location in the box below or click the "Browse" button to locate the image file

Step 3: Click the "Update Software" button once to upload the new image file.

NOTE: The update process takes about 2 minutes to complete, and your Broadband Router will reboot.

Software File Name:

5-8 Reboot

Click on “**Reboot**” button to restart the device.

Click the button below to reboot the router.

Reboot

6. Appendix

6-1 Hardware Specifications

Antennas: 5 dBi fixed antennas

Power Supply: AC power adaptor: 100VAC-240VAC
DC voltage: 12V DC, 1A

Hardware Interfaces: One RJ-11 port (for ADSL Line), Four 10/100Mbps RJ-45 Ports, One Power switch, One Reset button, Two Wireless antenna, WLAN button, WPS button and One USB 2.0(Host) Port

ADSL Standards: ANSI T1.413 issue2, ITU-T G992.1 with Annex A (G.dmt)
ITU-T G.992.2 Annex A (G.lite), ITU-T G.992.3 Annex A, L, M (ADSL2)
ITU-T G.992.5 Annex A, M (ADSL2+), ITU-T G 994.1
ITU-T G.997.1, ETSI ETR-328

Protocol & Features Supported: RFC 2684 IP Bridging, RFC 2684 IP Routing, RFC 2516, PPPoE, RFC 2364 PPPoA, NAT & PAT (RFC 1631), DMZ support

Software features: IP filtering, Stateful packet inspection, (IPSec, L2TP, PPTP) pass through, Support TR069

Quality of Service: Port based QoS

Wireless Standard and feature: IEEE 802.11b/g/n, 64/128 bit WEP, Multiple SSIDs Support, Support for WPA, WPA2-PSK, WPA-PSK, TKIP, AES.

Dimensions:

Net Dimensions: 149 x 130.08 x 28.8 mm

Gross Dimensions: 213 x 158 x 82 mm

Weight:

Net weight: 500 gms

Gross weight: 600 gms

Environmental Specifications:

Operating temperature: 0° C to 50° C

Non-operating temperature: -20° C to 70° C

7. Troubleshooting

If you find that the router is not working properly or stops responding don't panic! Before you contact your dealer of purchase for help, please read this troubleshooting first.

Scenario	Solution
Unable to access the router through web page	<ul style="list-style-type: none"> a. Please check the power cord connection and network cable of this router. All cords and cables should be correctly and firmly inserted into the router. b. If all LED's on the router are off, please check the status of A/C power adapter, and make sure it's correctly powered. c. You must use the same IP address subnet as the router uses. d. Are you using MAC or IP address filter? Try to connect the router by another computer and see if it works; if not, please restore your router to factory default settings (pressing 'reset' button for over 10 seconds). e. Set your computer to obtain an IP address automatically (DHCP), and see if your computer can get an IP address. f. If you did a firmware upgrade and this happens, contact your dealer of purchase for help. g. If all above solutions don't work, contact the dealer of purchase for help. h. Clear your Internet browser history and cache memory.
Can't get connected to Internet	<ul style="list-style-type: none"> a. Please be patient, sometimes Internet is just that slow. b. Bypass the router and verify whether you can get connected to internet as before. c. Check PPPoE user ID and password again. d. Call your Internet service provider and check if there's something wrong with their service. e. If you just can't connect to one or more websites, but you can still use other internet services, please check URL/Keyword filter. f. Try to reset the router and try again.

	<p>g. Verify the line with device provided by your Internet service provider too.</p> <p>h. Try to use IP address instead of hostname. If you can use IP address to communicate with a remote server, but can't use hostname, please check DNS settings.</p>
I can't locate my router by my wireless client	<p>a. 'Broadcast ESSID' set to off?</p> <p>b. Both the antennas are secure.</p> <p>c. Are you too far from your router? Try to get closer.</p> <p>d. Please remember that you have to input ESSID on your wireless client manually, if ESSID broadcast is disabled.</p>
File download is very slow or breaks frequently	<p>a. Are you using QoS function? Try to disable it and try again. Internet is slow sometimes, be patient.</p> <p>b. Try to reset the router and see if the download speed improves.</p> <p>c. Try to know what other clients do on your local network. If some clients are transferring files of big size, other clients will get an impression that Internet is slow.</p> <p>d. If this has never happened before, call your Internet service provider to know if there is something wrong with their network.</p>
I can't log onto web management interface: password is wrong	<p>a. Make sure you're connecting to the correct IP address of the router (Default IP: 192.168.1.1).</p> <p>b. Password is case-sensitive. Make sure 'Caps lock' is not on.</p> <p>c. If you have forgotten the password, do a hard reset.</p>
Router gets heated up	<p>a. This is not a malfunction as long as you are able to touch the router's case.</p> <p>b. If you smell something wrong or see smoke coming out from the router or A/C power adapter, please disconnect the router and A/C power adapter from the utility power (make sure it's safe before you're doing this), and call your dealer of purchase for help.</p>
The date and time of all event logs are wrong	<p>a. Adjust the time zone in 'System > Time Zone' settings of the router.</p>

8. Glossary

Default Gateway (Router): Every non-router IP device needs to configure a default gateway IP address. When the device sends out an IP packet, if the destination is not on the same network, the device has to send the packet to its default gateway, which will then send it to the destination.

DHCP: Dynamic Host Configuration Protocol. This protocol automatically gives every computer on your home network an IP address.

DNS Server IP Address: DNS stands for Domain Name System, which allows Internet servers to have a domain name (such as www.Broadbandrouter.com) and one or more IP addresses (such as 192.34.45.8). A DNS server keeps a database of Internet servers and their respective domain names and IP addresses, so that when a domain name is requested (as in typing "Broadbandrouter.com" into your Internet browser), the user is sent to the proper IP address. The DNS server IP address used by the computers on your home network is the location of the DNS server your ISP has assigned to you.

DSL Modem: DSL stands for Digital Subscriber Line. A DSL modem uses your existing phone lines to transmit data at high speeds.

DMZ: DMZ is a physical or logical subnetwork that contains and exposes an organization's external services to a larger untrusted network, usually the Internet. The purpose of a DMZ is to add an additional layer of security to an organization's local area network (LAN); an external attacker only has access to equipment in the DMZ, rather than any other part of the network.

Ethernet: A standard for computer networks. Ethernet networks are connected by special cables and hubs, and move data around at up to 10/100 million bits per second (Mbps).

Idle Timeout: Idle Timeout is designed so that after there is no traffic on the Internet for a pre-configured amount of time, the connection will automatically get disconnected.

IP Address and Network (Subnet) Mask: IP stands for Internet Protocol. An IP address consists of a series of four numbers separated by periods, which identifies a single, unique Internet computer host in an IP network. Example: 192.168.2.1. It consists of 2 portions: the IP network address, and the host identifier.

The IP address is a 32-bit binary pattern, which can be represented as four cascaded decimal numbers separated by ".": aaa.aaa.aaa.aaa, where each "aaa" can be anything from 000 to 255, or as four cascaded binary numbers separated by ".": bbbbbbbb.bbbbbbbb.bbbbbbbb.bbbbbbbb, where each "b" can be either 0 or 1.

A network mask is also a 32-bit binary pattern, and consists of consecutive leading

1's followed by consecutive trailing 0's, such as 11111111.11111111.11111111.00000000. Therefore sometimes a network mask can also be described simply as "x" number of leading 1's.

When both are represented side by side in their binary forms, all bits in the IP address that correspond to 1's in the network mask become part of the IP network address, and the remaining bits correspond to the host ID.

For example, if the IP address for a device is, in its binary form, 11011001.10110000.10010000.00000111, and if its network mask is, 11111111.11111111.11110000.00000000

It means the device's network address is 11011001.10110000.10010000.00000000, and its host ID is, 00000000.00000000.00000000.00000111. This is a convenient and efficient method for routers to route IP packets to their destination.

ISP Gateway Address: (see ISP for definition). The ISP Gateway Address is an IP address for the Internet router located at the ISP's office.

ISP: Internet Service Provider. An ISP is a business that provides connectivity to the Internet for individuals and other businesses or organizations.

LAN: Local Area Network. A LAN is a group of computers and devices connected together in a relatively small area (such as home or office). Your home network is considered a LAN.

MAC Address: MAC stands for Media Access Control. A MAC address is the hardware address of a device connected to a network. MAC address is a unique identifier for a device with an Ethernet interface. It is comprised of two parts: 3 bytes of data that correspond to the Manufacturer ID (unique for each manufacturer), plus 3 bytes that are often used as the product's serial number.

NAT: Network Address Translation. This process allows all the computers on your home network to use one IP address. Using the broadband router's NAT capability, you can access Internet from any computer on your home network without having to purchase more IP addresses from your ISP.

Port: Network Clients (LAN PC) uses port numbers to distinguish one network application/protocol over another. Below is a list of common applications and protocol/port numbers:

Application	Protocol	Port Number
Telnet	TCP	23
FTP	TCP	21
SMTP	TCP	25
POP3	TCP	110
H.323	TCP	1720
SNMP	UDP	161
SNMP Trap	UDP	162
HTTP	TCP	80
PPTP	TCP	1723
PC Anywhere	TCP	5631
PC Anywhere	UDP	5632

Port triggering: Port triggering is a configuration option on a NAT-enabled router that allows a host machine to dynamically and automatically forward a specific port back to itself. Port triggering opens an incoming port when your computer is using a specified outgoing port for specific traffic.

PPPoE: (Point-to-Point Protocol over Ethernet.) Point-to-Point Protocol is a secure data transmission method originally created for dial-up connections; PPPoE is for Ethernet connections. PPPoE relies on two widely accepted standards, Ethernet and the Point-to-Point Protocol. It is a communication protocol for transmitting information over Ethernet between different manufacturers.

Protocol: A protocol is a set of rules for interaction agreed upon between multiple parties so that when they interface with each other based on such a protocol, the interpretation of their behavior is well defined and can be made objectively, without confusion or misunderstanding.

Router: A router is an intelligent network device that forwards packets between different networks based on network layer address information such as IP addresses.

Subnet Mask: A subnet mask, which may be a part of the TCP/IP information provided by your ISP, is a set of four numbers (e.g. 255.255.255.0) configured like an IP address. It is used to create IP address numbers used only within a particular network (as opposed to valid IP address numbers recognized by the Internet, which must be assigned by InterNIC).

TCP/IP, UDP: Transmission Control Protocol/Internet Protocol (TCP/IP) and Unreliable Datagram Protocol (UDP). TCP/IP is the standard protocol for data transmission over the Internet. Both TCP and UDP are transport layer protocols. TCP performs proper error detection and error recovery, and thus is reliable. UDP on the other hand is not reliable. They both run on top of the IP (Internet Protocol), a network layer protocol.

WAN: Wide Area Network. A network that connects computers located in geographically separate areas (e.g. different buildings, cities, countries). The Internet is a wide area network.

Web-based management Graphical User Interface (GUI): Many devices support a graphical user interface that is based on the web browser. This means the user can use the familiar Netscape or Microsoft Internet Explorer to Control/configure or monitor the device being managed.

3G telecommunication networks: Supports services that provide an information transfer rate of at least 200 kbit/s. However, many services advertised as 3G provide higher speed than the minimum technical requirements for a 3G service. Later 3G releases, often denoted 3.5G and 3.75G, also provide mobile broadband access of several Mbit/s to smartphones and mobile modems in laptop computers.

This product comes with lifetime warranty.
